Lungs

Brain

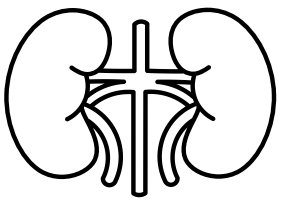

Stomach

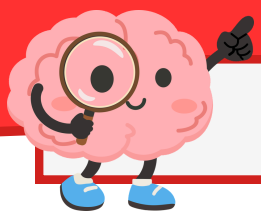

Heart

Bladder

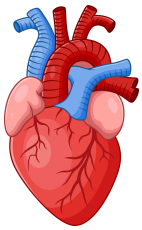

Kidneys

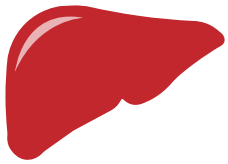

MY ORGANS

Instructions: Match the functions to each organ.

Helps us breathe by taking oxygen in, and sending carbon dioxide out.

Removes waste from the blood and makes urine.

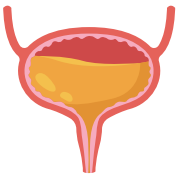

A small and large part that absorbs food and water, and excretes waste.

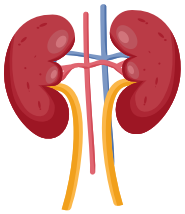

Pumps blood around our body to keep us alive.

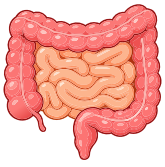

Digests the food we eat.

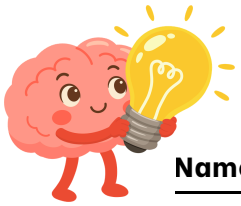

Cleans our blood, makes bile, and stores sugar.

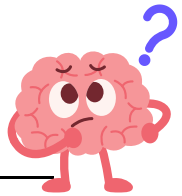

The control centre of our body. Controls our speech, , memory, thoughts, coordination and emotions.

Stores and releases waste from our body as urine.

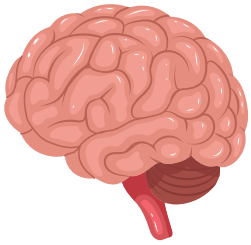

Name: _____ Date: _____
